Global Liquidity Watch: Weekly Update

Liquidity Rolls Over as Dollar and Volatility Bite

MICHAEL HOWELL
APR 07, 2026 · PAID

Global liquidity has peaked and is declining, with growth slowing as base effects fade and liquidity momentum weakens. Support from the PBoC and Fed is being outweighed by a stronger US dollar, elevated bond volatility, and weak BoJ/ECB/BoE liquidity. Investor risk appetite has moderated but remains moderately risk-on.

Global Liquidity Update

Latest data confirm that we are past peak **Global Liquidity**. Updated ***flash*** estimates show a further fall to **US$187.3tr**. The 3m annualized growth rate, a measure of short-term momentum, has dipped to 3.6% and the annual rate of growth to 5.5%. The base effect which underpinned annual growth rates in early 2026 is fading fast
